

Dross Eliminator

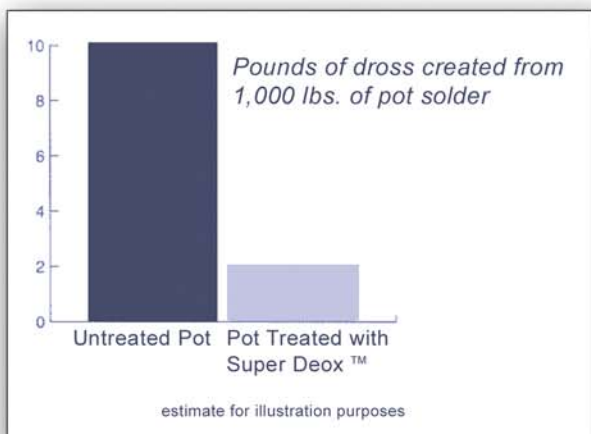

Super Deox is specifically formulated to reduce and prevent the oxides of solder, (known as dross) on still pots and wave solder machines. Super Deox is a white powder material that will lower your cost by reducing dross and solder consumptions.

Other Dross reducing products generally composed of mineral oils and fatty acid compounds, break down and may deposit on the PC board assemblies.

To avoid such problems, be sure and order Super Deox #1 for lead pots or Super Deox #H1 for lead free pots.

Free evaluation samples are available call Qualitek or your local sales associate.
